
Workforce Optimization

Intelligent automation and workload provisioning.

Increasing the speed of routine recurring tasks and reducing the ongoing human effort associated with planning, managing and communicating, will reduce aircraft turnaround times and operating costs.

GroundCentric247 integrates flight information, team rosters and asset availability in real-time for the efficient management of your assets and ground teams.

Policy-based automation across a single platform, speeds up common processes and enables you to dynamically schedule tasks.

The result is balanced workloads and improved service availability – critical to consistent delivery against KPI's.

Ramp workforce management

- Connect with your teams, assign jobs and manage tasks from a unified platform
- Efficiently coordinate with a large number of teams and assets
- Automatically trigger pre-specified actions and communications for the efficient loading/offloading of jobs
- Continuously monitor real time data and KPI's

Team leader mobile app

- Team leaders receive job information, alerts and updates in real time via a tablet app, with two way communication enabled

Workforce mobile app

- Provides two way communication and messaging with drivers
- Paperless, real-time communications bring efficiency
- Jobs are dispatched to the vehicles driver display with real time automated updates
- Automated triggering of any end time job changes to the workforce on the ramp like bay change, flight cancellations etc.

Manage your assets and ground teams in real-time, all from a **single integrated platform.**

GroundCentric247. A fully integrated, 'live-in-real-time' solution.

Our secure VPN and Cloud based solution provides you with simple deployment, full mobility and scalability, and ongoing innovation to keep you at the forefront of your industry.

Full global distribution system (GDS) integration, customer, operator and driver-facing apps, real-time reporting, and an API for interfacing with external systems.

Advanced process automation - proven to improve performance against KPI's while reducing operating costs.
